Input module switch board

Description

This board contains the "on-off" switch buttons for the input module.

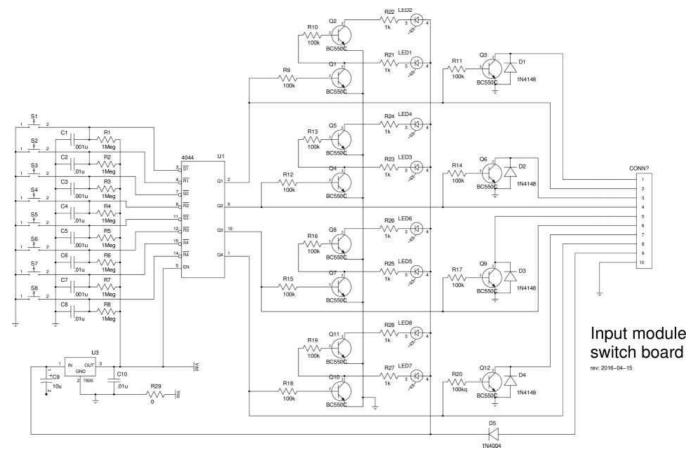

Each channel has two outputs:

1. A logic level, 5 volts.

Logic high turns the channel on. Logic low turns the channel off. If the board is unplugged (missing), the channel is on.

2. NPN Open collector for controlling external devices. The transistor is on when the channel is on.

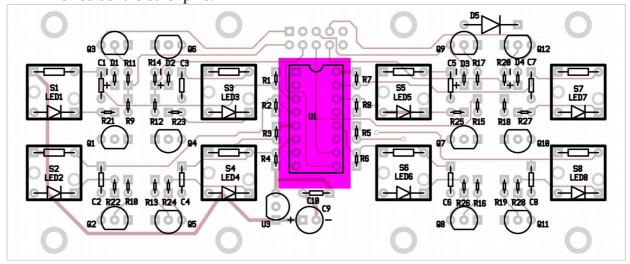

Schematic

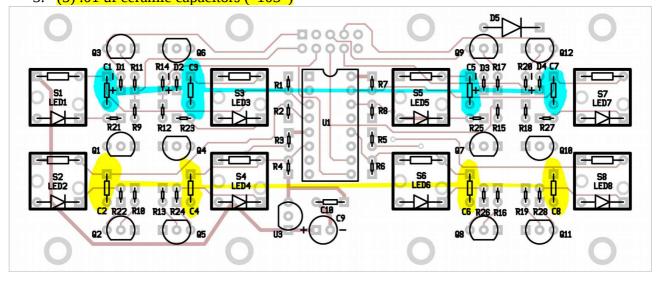

PCB assembly

1. (1) 16 pin IC socket

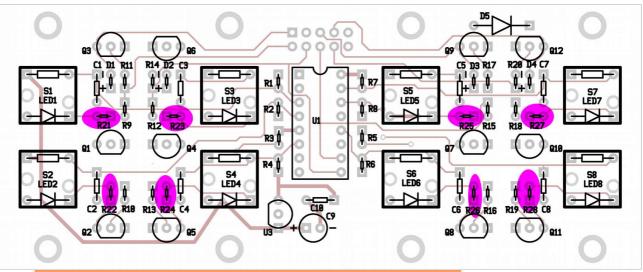

Note direction. The notch (pin 1) goes up as viewed in the picture. To make sure it is seated, solder one pin then check. Reheat if necessary. Then solder the other pins.

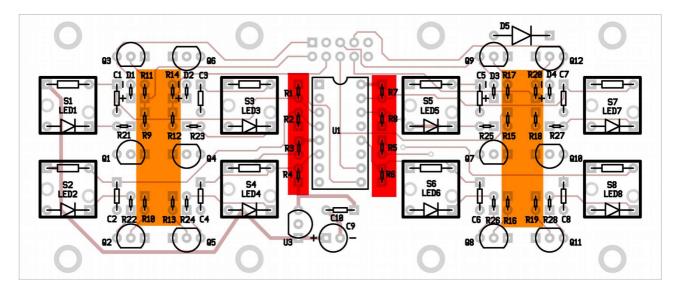

(4) .001 uf ceramic capacitors ("102")
 (5) .01 uf ceramic capacitors ("103")

4. (8) 1000 ohm (1k) resistors (brown black black brown brown) ("10011")

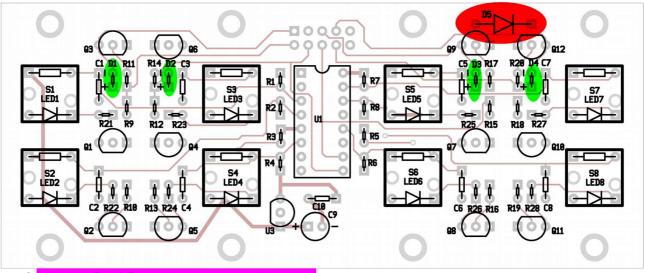

5. (12) 100k resistors (brown black black orange brown) ("10031")
6. (8) 1Meg resistors (brown black black yellow brown) ("10041")

(4) small (1N4148) diodes 7.

Note polarity! The stripe is the "cathode", matches the bar on the schematic, and the "-" end on the layout. Bend the leads so the stripe is up. Install so the body is at the "+" end.

8. (1) power (1N4007) diode Note polarity! Install flat, so the stripe matches the bar on the layout.

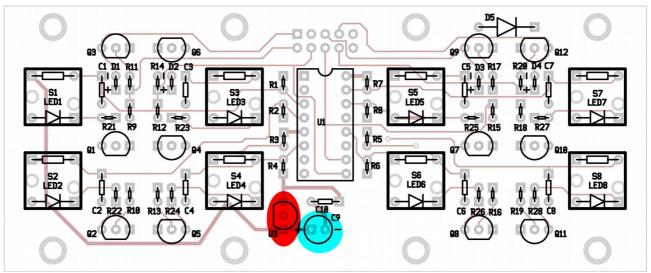

(12) BC550C transistor – note orientation 9. 0000 0 0 0 89 Q12 **Q**3 86 D1 R11 C5 D3 R17 14 17 |+ • 1<u>+</u>‡ ŧ‡ŧ R1 🖡 \$ R7 þ S1 LED1 S3 LED3 S5 LED5 S7 LED7 R2 \$ ŧ **₿ R8** ¢ ¢ N D Þ 0 [™] ----R18 R27 U1 R12 R15 R3 🎗 \$ R5 0 97 01 918 04 3 -\$ R6 ⊐ R4 🛊 S6 LED6 S2 LED2 S4 LED4 S8 LED8 11 ţţ ¢ ¢ ¥ **†** † ų N C10 C2 R22 R10 R13 R24 C4 R19 R28 C8 6 **R16** 82 811 95 88 113

10. (1) 78L05 voltage regulator. – note orientation.

11. (1) 47 uf electrolytic capacitor.

The front side of the board is mostly complete. Only the buttons and IC need to be installed. Before doing that, turn the board over and install the connector on the back.

12. (1) 10 pin rectangular connector. Be sure it is oriented correctly. The cutout should face the bottom of the board.

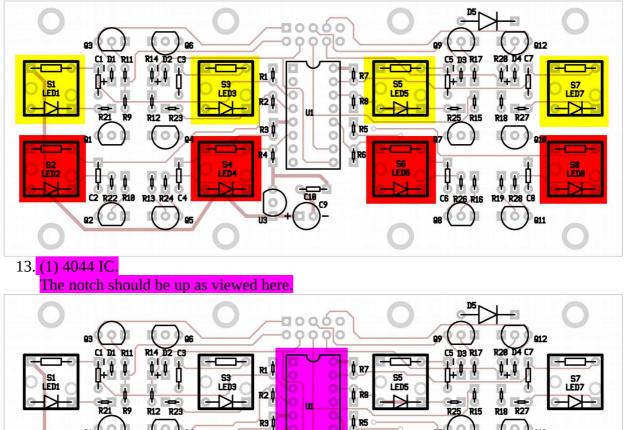

Turn the board back to the front.

13. (8) Buttons

(4) Red buttons for stop/off(4) Yellow buttons for start/on

Be sure the buttons are seated properly to line up with the panel. To make sure it is seated, solder one pin then check. Reheat if necessary. Then solder the other pins.

The board is now complete, ready to mount on the panel.
